Deploying a Secure Autonomous Agent

ODSC 2026 · Hands-On Workshop · Please download/install before the session

> **Wi-Fi tip:** Download installers and save account pages as PDFs before you arrive. The workshop notebooks run locally — you only need internet access for initial API calls.

1 SOFTWARE TO INSTALL

Docker Desktop (required)

Runs both agents in isolated containers.

- Mac (Apple Silicon): Docker Desktop dmg
- Mac (Intel): Docker Desktop dmg
- Windows: Docker Desktop exe
- Linux: Docker Engine + Compose plugin

Download: docker.com/products/docker-desktop

Python 3.10+ (required)

Most attendees will already have this.

- Mac: use Homebrew — `brew install python`
- Windows / Linux: python.org/downloads

Verify: `python --version`

Git (required)

Download: git-scm.com/downloads

2 ACCOUNTS & API KEYS

Service	Purpose	Cost	Sign-up URL
OpenAI	Powers agent reasoning	PROVIDED AT WORKSHOP	—
Brave Search API	Web search skill for finding compliance pages	FREE (2,000 REQ/MO)	brave.com/search/api
Telegram	Receive live compliance alerts on your phone	FREE	telegram.org
Opik (Comet)	Agent observability & tracing	OPTIONAL — FREE	comet.com/opik

> **Do before the workshop:** Sign up for Brave Search and Telegram. Copy your API keys somewhere accessible (notes app, printed sheet). The OpenAI key will be handed out at the start of the session.

3 TELEGRAM BOT SETUP (5 min — do this before arriving)

1. Open Telegram and search for **@BotFather**. Send `/newbot`.
2. Choose a display name (e.g. *Compliance Alert Bot*) and a username ending in `bot`.
3. BotFather replies with your **HTTP API token —** save it.

4. Send your bot any message (e.g. "hello"), then open:
   `https://api.telegram.org/bot<YOUR_TOKEN>/getUpdates`
   Find `"chat":{"id": 123456789}` — that number is your **chat ID**.

4 GET THE REPO READY

1. **Clone:** `git clone https://github.com/saskinosie/odsc-2026-autonomous-compliance-agent.git`
2. **Virtual env:** `python -m venv .venv && source .venv/bin/activate` (Windows: `.venv\Scripts\activate`)
3. **Dependencies:** `pip install -r requirements.txt`
4. **Docker pull (saves time on-site):** `docker compose -f custom-claw/docker-compose.yml pull`

5 OFFLINE REFERENCE DOCS TO SAVE AS PDF

Document	URL	Why you need it offline
Docker Desktop Install Guide	docs.docker.com/desktop	Troubleshooting install issues
Brave Search API Docs	brave.com/search/api	API key setup & rate limits
Opik Quickstart	comet.com/docs/opik	Observability setup in Part 5
ETS Praxis State Requirements	ets.org/praxis/states.html	Domain context for the agent
Workshop README	*Included in the repo*	Full architecture & commands reference

6 KEY TERMS CHEAT SHEET

Term	What it is
Custom Claw	~150-line Python script you build yourself. Fetches pages, hashes content, diffs against SQLite snapshots, fires Telegram alerts.
OpenClaw	Agent framework running in Docker. Same logic as Custom Claw but with scheduling, a web dashboard, and 50+ built-in skills.
Opik	Observability platform — captures every agent turn as a trace so you can inspect inputs, outputs, and latency.
Praxis	ETS standardized exams required for teacher licensure across most US states.
NASDTEC	Organization managing interstate teacher certification agreements.
